

## ARCTIC TRUCKS AT44 FORD SUPER DUTY 4X4

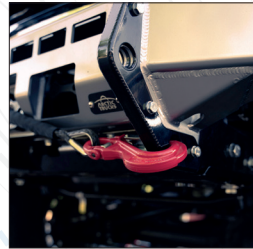

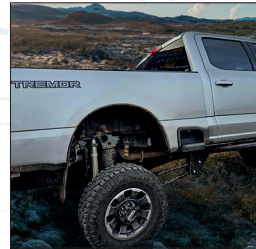

The legendary off-road performance that Arctic Trucks has built its reputation on meets North America's most rugged and reliable pickup truck. We've designed our AT44 Ford Super Duty with function first. The combination of off-road capability and payload capacity makes this truck a versatile tool for logistics operators, remote construction projects, Search & Rescue, exploration, surveying, or any critical missions in remote and demanding terrain. Our proprietary, DOT compliant 44" Arctic Trucks/Nokian tires provide unmatched floatation for superior traction in snow, mud, and over rocky terrain, while allowing normal highway travel between your off-road expeditions. Available with a multitude of options such as a four-link rear air suspension, auxiliary fuel tanks, central tire inflation, and multiple bed options, the AT44 Super Duty is custom built to fulfill the needs of your mission.

**BASE PACKAGE PRICE = \$68,935 USD / \$93,224 CAD**  
(EXCLUDING BASE VEHICLE)

This is not your average lifted truck. In fact, it's hardly lifted at all. Arctic Trucks takes great measures to re-engineer the body and frame to minimize suspension lift and keep the truck's center of gravity low. Ensuring equalized ground pressure on each tire when off-road, this approach also provides a confident and comfortable ride with less driver fatigue and improved accessibility.

Our optional four-link rear suspension offers up to 12" of suspension travel, dramatically improving traction over uneven surfaces and improving comfort when traveling over rough roads. Proprietary shocks and springs and carefully selected suspension geometry modifications expand our truck's performance envelope off-road without compromising versatility.

An extensive option list covers the needs of a wide range of applications. Looking for something you don't see? Talk with us about building something unique for you - we'll utilize our decades of experience to make sure you end up with the right tool for the job.

### STANDARD FEATURES

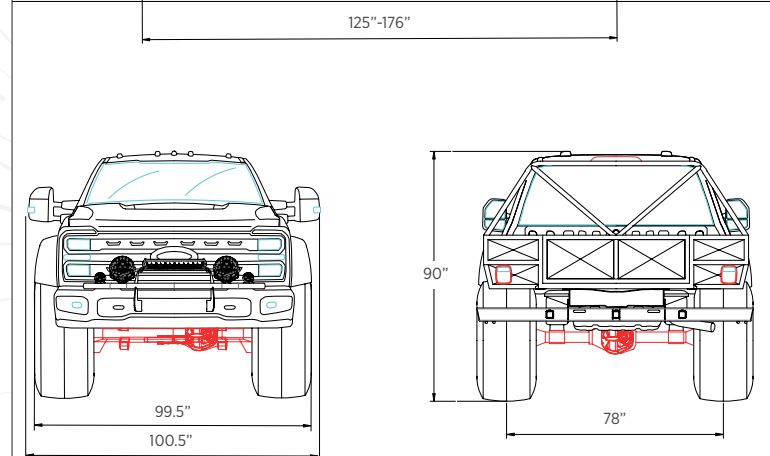

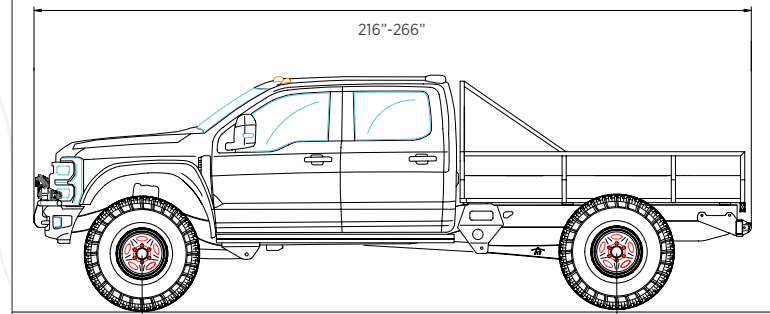

- Arctic Trucks AT44 frame & body conversion
- Arctic Trucks 17"x15" steel wheels
- 44"x18" Arctic Trucks/Nokian Hakkapeliitta radial tires
- Arctic Trucks 3" lift suspension
- Fox/ATS steering damper
